Financial Structure at a Glance

A concise visual review for the person who defined the financial arrangements.

How to read this: This is a derived visual summary of the current **docs-final-v2** target, not a new agreement. Open decisions appear on the final page. If wording differs, the authoritative V2 documents govern.

1. Where do the relationships sit?

PLATFORM
Companies, accounts and protected settings.

→

COMPANY / TENANT
Hard data isolation boundary and one consolidated Company accounting scope.

→

BRANCH / GARAGE
Operational location within the Company, not a second Tenant.

INVESTOR ↔ COMPANY
The Investor Fund is a Company-scoped position. Each funded Stock Vehicle has exactly one funding Investor. Approved Fund use is linked to that Vehicle and its costs; the Garage is not an intermediary, holder or recipient of Investor Funds.

OWNER ↔ COMPANY
Owner recipients participate through period-based distribution of confirmed Company-level distributable Profit, not a direct payout from each Vehicle deal.

Distinct financial positions

Investor principal Fund
Auditable Company-level capital position: contribution, approved use, actual recovery, withdrawal and settlement. Available and committed/locked amounts remain distinct.

Company Running Capital
The Company's exact actual contribution to approved Vehicle cost. Separate from Investor principal; not interest, premium or extra return.

Company Accounting
Company Share, Garage Revenue, other income and expenses, and actual receipts/payments, linked to their source without counting an amount twice.

Review point: Investor Fund, Company Running Capital, Garage Revenue, Company result and Owner Distribution are distinct positions. The V2 documents do not define one combined balance called a single "pool" for all of them.

Source: V2 01 - Platform, Investor Fund, Company result; V2 02 - Roles; V2 04 - Relationships; V2 09 - Accounting.

Stock Vehicle: From Funding to Sale

2. How a Vehicle is funded

Investor Fund - Company-scoped position
An authorized funding action applies available Investor principal to approved cost of the linked Stock Vehicle. The Fund cannot be silently overdrawn. A Garage Job alone neither receives nor debits Investor Funds.

Actual Company Running Capital
The Company may actually cover approved Vehicle cost not funded by the Investor. This contribution is linked to the Vehicle separately.

ONE STOCK VEHICLE
One Company-wide identity; movement between Branches retains work and cost history.

→

VALID TOTAL COST
Purchase plus approved work, parts, Labour and Job expenses. Each cost counts once.

→

SALE
Agreed Sale Price, Sold status and Buyer collection status are separate facts.

3. Sale price versus actual cash

Agreed Sale
Price and Buyer obligation.

→

Actual Buyer Payments
Each confirmed receipt is its own event.

→

Receivable / Refund
Amount still due and amount owed back remain separate.

A new Buyer Payment cannot exceed the current receivable; an actual refund cannot exceed the current Refund Payable. Corrections retain the original payment history.

> **Final Vehicle settlement gate:** The agreed Sale must be fully collected, and applicable refunds resolved. Sale confirmation, partial collection or a calculated gain alone does not finalize settlement.

4. Normal positive-result sequence

1. **Investor principal**
   Reconcile outstanding principal against actual collection.
2. **Company capital**
   If contributed, recover/reconcile actual Running Capital as capital only.
3. **Positive result**
   Determine the remaining approved positive economic result.
4. **Shares**
   Apply the effective Investor agreement; Company Share is the remainder.

INVESTOR SHARE
Eligible Investor Profit position; actual payment is confirmed separately.

+

COMPANY SHARE
The Company's share of the Vehicle result enters Company Accounting with source linkage; it is never a direct Owner deal payout.

The Investor positive-share rate follows the effective agreement. A 33% rate may be the current standard configuration, but is neither mandatory nor hard-coded. Capital recovery is not counted again as income or Profit.

Source: V2 01 - Vehicle, Investor Fund; V2 05 - sections 1-3; V2 09 - Positive Vehicle Company Share.

Garage, Company Result, Owner Distribution

5. Two Garage financial paths

A - Funded Stock Vehicle work

Investor Fund → authorized funding action linked to Stock Vehicle and approved Vehicle cost. Separately: Stock Vehicle → Branch Garage Job → work/cost record **once** → Vehicle result. Investor Funds do not route through or belong to the Garage; a Job record alone is not a Fund debit.

B - External Customer Garage work

Customer Vehicle → Job/charge → actual receipt and remaining receivable → Garage Revenue → Company Accounting. This Vehicle needs no Investor; Garage can operate with the Investment module OFF.

Vehicle Labour cost and a manually confirmed payment to a worker are distinct events.

6. Consolidated Company result

Vehicle-business Company Share + Garage Revenue + Other Company Income - Company Expenses
= Company Profit / Loss (conceptual result)

One Company accounting boundary consolidates its Branches. A Branch source remains traceable. A receipt or cost visible in Investment, Garage and Accounting contributes to the economic result only once.

7. Route to Owner recipients

Company result
Source-linked consolidated position.

→

Confirmed distributable Profit
Exact basis and period close remain open decisions.

→

Owner Distribution
Company-level, Half-yearly or Annual.

Configured recipients
Protected effective Owner percentages split an approved positive pool exactly in INR paise using balanced reconciliation; allocations cannot be negative. The 48.5% / 51.5% standard is configurable, not mandatory.

Actual payments
An allocation suggestion or period end is not Paid. Each recipient payment needs authorized actual confirmation; a partial payment leaves an open payable.

BUSINESS DECISION REQUIRED: The exact amount distributable from Company result, income/expense recognition, period close and carryforward are not yet fully defined.

Source: V2 01 - Company result; V2 03 - Module boundaries; V2 09 - Company result and Owner allocation; V2 10 - Garage.

Four Distinct Investor Timelines

1 - Funded Vehicle deal

Fund use → Sale → full Buyer collection and refund resolution → principal recovery → eligible deal Profit → **actual confirmed payment**. Ordinary eligible Profit may be paid while the Investor remains Active.

2 - Monthly Interim Payout

Each Investor has an effective monthly rate and cycle day. Due/Suggested is not Paid; actual payment is separately confirmed. This is an advance stream distinct from earned deal Profit. The precise eligible-principal base and withdrawal limits remain open.

3 - Six-month / Annual Investor reconciliation

Relevant earned Investor Profit ↔ confirmed Interim and ordinary Profit payments already made → one remaining payable or Company-recoverable position. Period end does not create payment or settlement automatically. Deal inclusion and the exact relationship between payout paths remain open.

4 - Exit and final Investor settlement

Terms acceptance and the normal three-month notice → Exit Requested → Settlement Pending → Closed. Resolve open Vehicles, Buyer balances/refunds, recoverables and corrections. Then settle **remaining principal first**, followed by **remaining eligible Profit**; never pay earlier Profit again.

> **Keep separate:** Investor principal, earned Profit, Interim advance, Company Running Capital and recoverables are not one payable. A status change is not a cash movement; only actual confirmed events are Paid.

Relationship for the decision maker to confirm

Which principal is eligible for Monthly Interim? How should ordinary deal Profit already paid enter period reconciliation? Both remain open decisions. The documents require prevention of duplicate payment.

Source: V2 01 - Monthly cycle, Exit; V2 05 - Deal Profit, Interim, Reconciliation, Exit.

Corrections, Loss and Decisions to Confirm

LOSS
A negative calculation alone assigns no Loss to Investor, Company or Owner. Impact, reason, authority and actual action require manual treatment; the exact rule remains open.

CORRECTIONS & REFUNDS
Linked corrections preserve original payment history. If corrected Sale price falls below cash received, Buyer Refund Payable stays open until actual refund is confirmed.

WHO CONFIRMS?
Platform Back Office administers protected rates. Accountant/Operations records authorized actual business payments. Owner has read access. Calculate → Suggest → Remind → Human Confirm → Record.

Seven business decisions still required

1. What is the eligible principal base for Monthly Interim, and how much principal may be withdrawn during an active cycle?
2. How do ordinary deal Profit, Interim payments and six-month/annual reconciliation interact without paying the same entitlement twice?
3. How does manually confirmed Loss affect Investor principal and Company Running Capital/finances, and who confirms it?
4. What are the exact basis, recognition, period close and carryforward rules for Company distributable Profit?
5. Who may authorize a Company-level correction to an older record from another Branch?
6. When, if ever, may Platform Back Office support view private Company finance without explicit Company assignment?
7. When a module is OFF, what minimum actions remain available to settle open obligations?

Review outcome: These seven questions should be decided and recorded before software rules are filled in for the affected financial or permission behavior. Confirmed V2 direction and open points are intentionally separated here.
